
(A)
Source
q_0
q_1
Targets
Which of model q_0, q_1 is better?
(Y_τ not observed)
$\Delta R_T = R_T(q_1) - R_T(q_0)$
(B)
Sensitivity assumption
$|\delta(z)| \leq \gamma$
Comparison strategies
Direct
Separate
contrast
risk first
(C)
$\Delta R_T \in [L_{1,\gamma} - U_{0,\gamma}, U_{1,\gamma} - L_{0,\gamma}]$
Separate
Direct
$\Delta R_T \in [L_\gamma, U_\gamma]$
$W_{dir} \leq W_{sep}$
Sharper identified set for ΔR_T
(D)
Sampling-aware decision interpretation
CANDIDATE
0
ΔR_T
$\overline{U}_\gamma < 0$
q_1 supported
REFERENCE
